**Subject:** Magnesium Hydroxide for pH and Treatment of the Gold King Mine Water

Martin,

I wanted to reach out to see if we can get in touch with the right person/contractor that is handling the wastewater treatment with the clean up project of the mine? We produce a Magnesium Hydroxide powder and slurry in Denver, CO. I know caustic soda is already being used in the treatment ponds. As you may already be aware, Magnesium Hydroxide is a non hazardous material that provides a more stable pH neutralization process without the concern of overdosing. We would be happy to assist any way that we can.

Thank you,

--
